

PHUMRAPEE KAEWMANEE

SOFTWARE ENGINEER / AI DEVELOPER / DATA ANALYSIS INTERNSHIP

Email : phumrapee47@gmail.com

Address : 3218/17 Nakhon ratchasima

Phone : 0927683886

ABOUT ME

Final-year Computer Science student at KMITL specializing in Full-Stack, Mobile development and Applied AI / Generative AI integration . Proven track record of developing end-to-end, production-ready systems, automated bot architectures, and real-time inference pipelines. Seeking a Software Engineer / AI Developer Internship to build scalable software and innovative AI-driven experiences.

EDUCATION

KING MONGKUT'S INSTITUTE OF TECHNOLOGY LADKRABANG

Bachelor of Science in Computer Science 4th Year Student

GPA: 3.00

PROJECTS

KNARES MT5: INSTITUTIONAL-GRADE SMC EXPERT ADVISOR (SENIOR CAPSTONE)

- 12-State Market Regime Classifier: Engineered a real-time market regime classifier to dynamically identify directional trends, sideways consolidation, volatility shocks, and breakout squeezes.
- SMC Context Engine: Developed an algorithmic market structure analyzer for automated detection of Break of Structure (BOS), Change of Character (CHoCH), liquidity sweeps, and Premium/Discount zones.
- 5-Layer Safety Limit Gate: Architected a 5-pillar risk management framework enforcing portfolio drawdown caps, maximum heat limits, and order clustering restrictions.
- Priority-Based Exit Arbitration: Implemented a 6-tier trade management logic orchestrating 1R partial close + breakeven safeguards with dynamic ATR-based trailing stops.

AI-POWERED REAL-TIME PUSH-UP TRACKER & GAMIFIED FITNESS APP

- Edge AI Inference: Integrated client-side YOLOv8 object detection via TensorFlow.js (@tensorflow/tfjs), achieving zero-latency in-browser video processing without server GPU overhead.
- Computer Vision Pipeline: Implemented real-time video stream tensor preprocessing (resize to 640x640, normalization), dynamic coordinate scaling, and Non-Maximum Suppression (NMS) parsing.
- State-Machine Counting: Designed a deterministic heuristic state engine tracking spatial bounding-box trajectories and depth thresholds to count repetitions and compute combo streaks.
- Full-Stack & Gamification: Built with Next.js 16, React 19, and TypeScript; integrated Supabase for workout history tracking, paired with Framer Motion and sound effects for real-time interactive feedback.

RESTUARANT ORDERING SYSTEM WITH LINE MESSAGING API

- Developed a full-stack LINE-integrated ordering system using React and Node.js.
- Built an Admin Dashboard for real-time order tracking and menu management.
- Integrated Supabase for database management and LINE Messaging API for automated notifications.

BOT SIGNAL XAUUSD TRADING WITH LINE AND TELEGRAM

- AI Trading Signal Bot (Crypto & forex)
- ML-Driven Signals: Built an automated system combining ML models with technical indicators for real-time BUY/SELL/HOLD signals.
- Hybrid Backend: Engineered a Node.js & PostgreSQL backend, executing Python ML scripts via child processes for high performance.
- Omnichannel Alerts: Integrated LINE Messaging API, Telegram, and LIFF for real-time notifications and user configuration.
- Cloud Deployment: Deployed on Render with optimized connection pooling to ensure high availability and bypass geo-restrictions.

EAT@SCI (MOBILE APPLICATION)

- Cross-Platform: Developed a responsive iOS/Android app using Flutter and Dart.
- Auto-Onboarding: Built a UI for automated student registration via KMITL institutional emails.
- Real-time UX: Implemented an order tracking interface with QR Code verification.
- Backend Integration: Integrated Supabase services for secure data handling and smooth API communication.

TARMBOON (MOBILE APPLICATION)

- Tarmboon (Mobile App): Developed a cross-platform frontend using Flutter for an online merit-making platform, featuring secure payment integration and an intuitive user interface for digital donations.

ALZHEIMER'S DISEASE PREDICTION

- ML Web Interface: Developed a user-friendly frontend using Streamlit to visualize clinical data and ML model predictions.

SKILLS

- Languages: JavaScript (ES6+), Python, Dart, SQL, Java, C++
- Frontend & Mobile: React, Vue.js, Flutter, Tailwind CSS, HTML5/CSS3, Vite
- Backend & Database: Node.js, Express, Supabase (PostgreSQL), Firebase, RESTful APIs
- AI & Machine Learning: ONNX Runtime, Scikit-learn, LightGBM, Pandas, NumPy
- Tools & DevOps: Git, GitHub, Render, Postman, MetaTrader 5 (MT5), Agentic AI Coding (Claude Code, Google Antigravity), Figma

LANGUAGES

- Thai Native
- English Intermediate
